

More Assert Methods

```
void assertEquals(expected, actual)
```

```
void assertEquals(expected, actual, String message)
```

- *expected* and *actual* must both be **Objects** or the same **primitive** type
- For **primitives**, this method compares using `==`
- For **Objects**, this method compares using the *equals* method
 - For your own objects, you'll need to define the *equals* method properly (as described on previous slide)

```
void assertEquals(int[] expected, int[] actual)
```

```
void assertEquals(int[] expected, int[] actual, String message)
```

- Asserts that two int arrays are equal
